research in control and estimation of distributed parameter systems encompasses a wide range of applications including both fundamental science and emerging technologies the latter include smart materials piezoceramics shape memory alloys magnetostrictives electrorheological fluids fabrication and testing design of high pressure chemical vapor deposition cvd reactors for production of microelectronic surfaces e g semiconductors while the former include groundwater contamination cleanup and other environmental modeling questions climatology flow control and fluid structure interactions as well as more traditional topics in biology mechanics and

acoustics these expository papers provide substantial stimulus to both young researchers and experienced investigators in control theory includes a comprehensive and lucid presentation that relates frequency domain techniques to state space or time domain approaches for infinite dimensional systems including design of robust stabilizing and finite dimensional controllers for infinite dimensional systems it focuses on these two approaches to control design in an integrated system theoretic framework this is excellent reading for researchers in both the frequency domain and time domain control communities in other articles topics considered include pointwise control of distributed parameter systems bounded and unbounded sensors and actuators stabilization issues for large flexible structures and an overview discussion of damping models for flexible structures

high definition video requires substantial compression in order to be transmitted or stored economically advances in video coding standards from mpeg 1 mpeg 2 mpeg 4 to h 264 avc have provided ever increasing coding efficiency at the expense of great computational complexity which can only be delivered through massively parallel processing this book will present vlsi architectural design and chip implementation for high definition h 264 avc video encoding using a state of the art video application with complete vlsi prototype via fpga asic it will serve as an invaluable reference for anyone interested in vlsi design and high level eda synthesis for video

this series on condensed matter theories provides a forum for advanced theoretical research in quantum many body theory the contributions are highly interdisciplinary emphasizing common concerns among theorists who apply many particle methods in such diverse areas as solid state low temperature statistical nuclear particle and biological physics as well as in quantum field theory quantum information and the theory of complex systems each individual contribution is preceded by an extended introduction to the topic treated useful details not normally presented in journal articles can be found in this volume

a seminal monograph first published by rulan chao pian in 1967 this is the standard reference on song dynasty music the book provides a mirror for scholars to reflect on the cultural social and theoretical dimensions of chinese music scholarship in the new millennium this new reprint edition features a foreword by bell yung and an introduction by joseph lam

the world is currently facing the urgent and demanding challenges of saving and utilizing energy as efficiently as possible materials science where chemistry meets physics has garnered a great deal of attention because of its versatile techniques for designing and producing new desired materials enabling energy storage and conversion this book is a comprehensive survey of the research on such materials unlike a monograph or a review book it covers a wide variety of compounds details diverse study methodologies and spans different scientific fields it contains cutting edge research in chemistry and physics from the interdisciplinary team of chime university japan the members of which are currently broadening the horizon of materials sciences through their own ideas tailored equipment and state of the art techniques edited by toshio naito a prominent materials scientist this book will appeal to anyone interested in solid state chemistry organic and inorganic semiconductors low temperature physics or the development of functional materials including advanced undergraduate and graduate level students of solid state properties and researchers in metal complex science materials science chemistry and physics especially those with an interest in semi conducting and or magnetic materials for energy storage and conversion
